

# SeaPower Model Testing

*Rachael Moore*

*Friday 31<sup>st</sup> October 2014*

*<http://www.seapower.ie/>*

# SeaPower Platform

- In development since 2008
- Primary objective – commercially viable wave energy converter in the next *four* years
  - Extract energy from ocean waves efficiently
  - Operate safely with minimum maintenance
  - Provide maximum economic return

# Outcomes

- Length of device and configuration of pontoons
- Position of pitching pontoon in relation to wave propagation
- Draft of the device
- Direction of the incident wave
- Power take off system

# Outcomes

- **Length of device and configuration of pontoons**
- Position of pitching pontoon in relation to wave propagation
- Draft of the device
- Direction of the incident wave
- Power take off system

1.

2.

3.

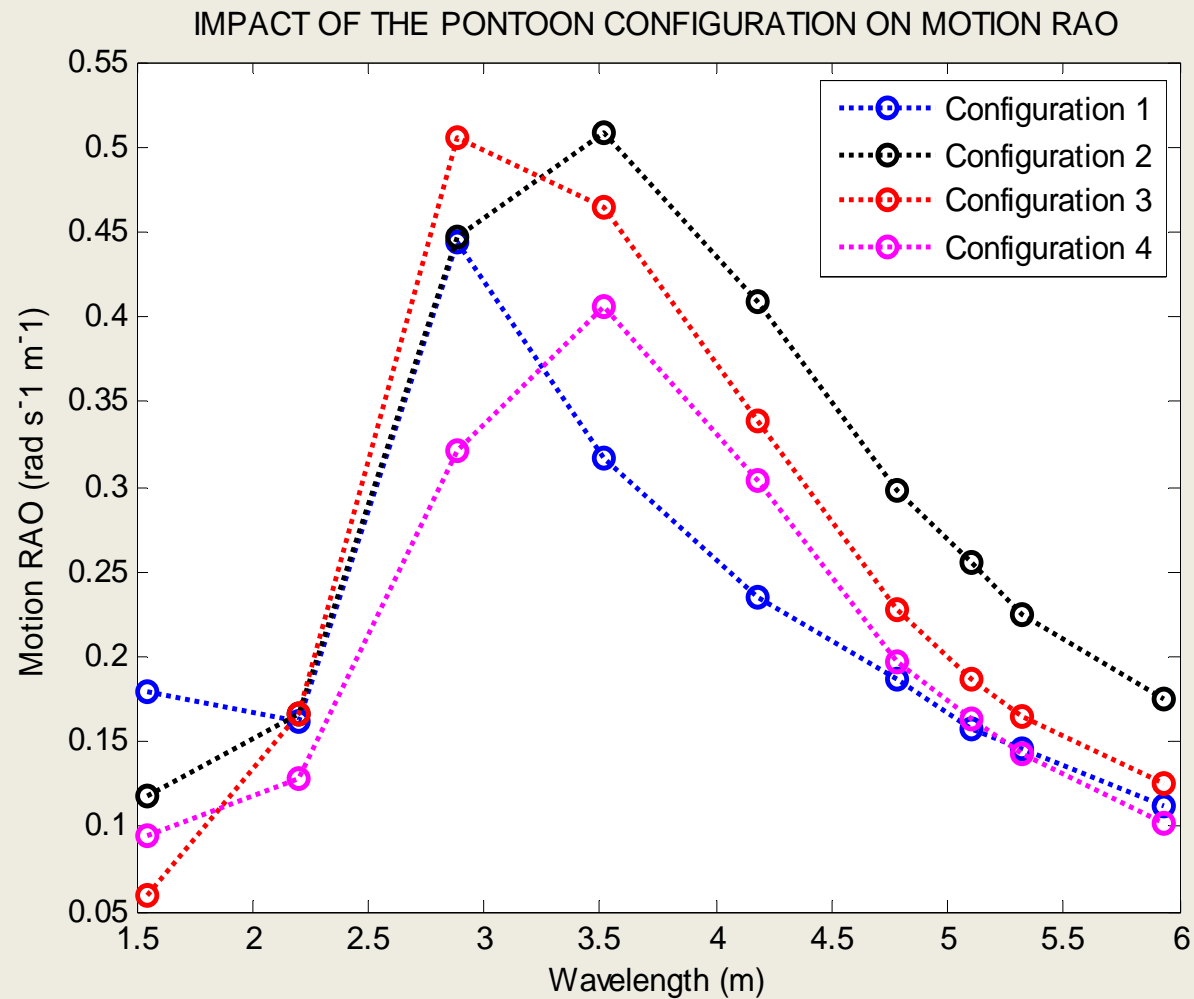

4.

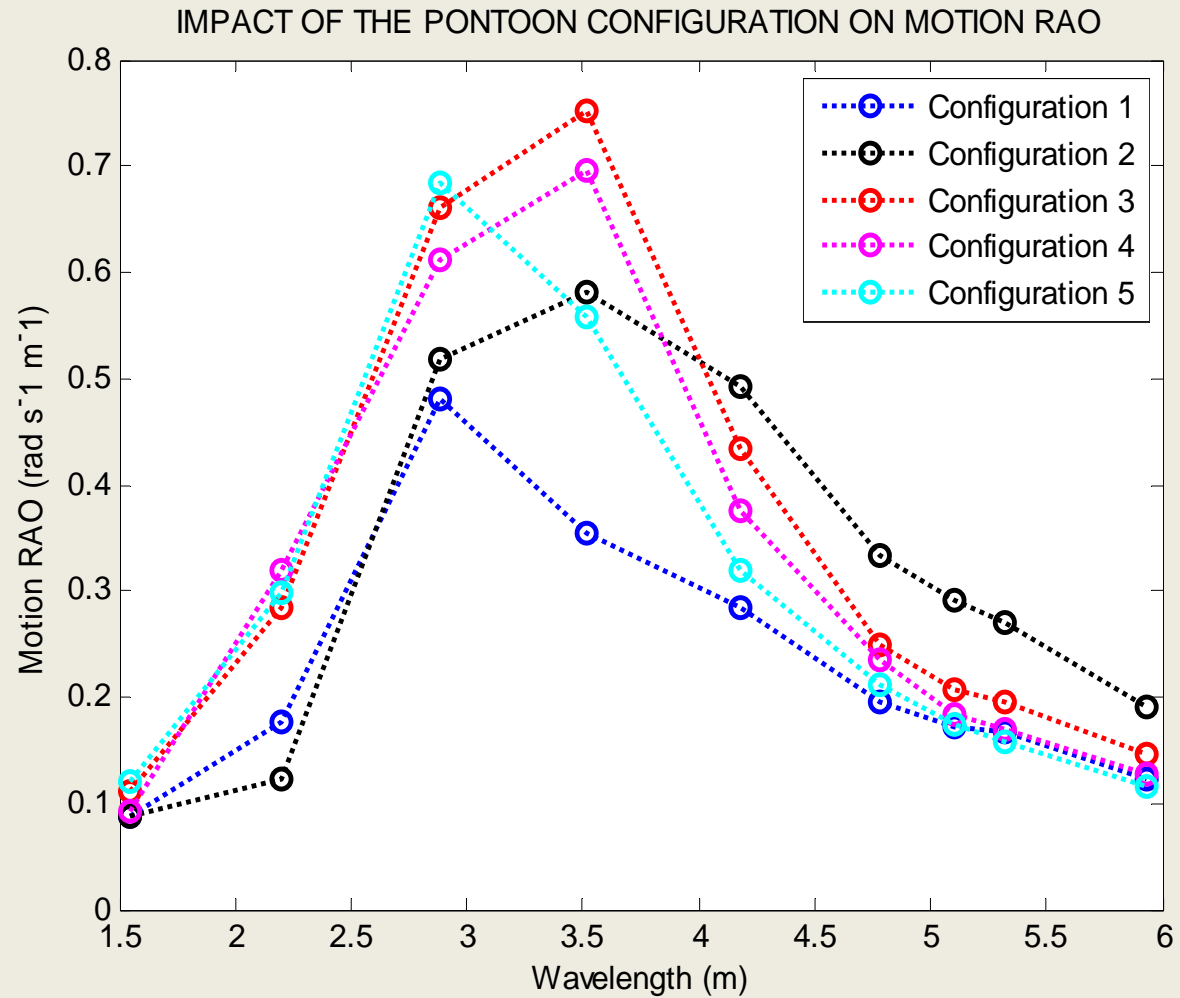

5.

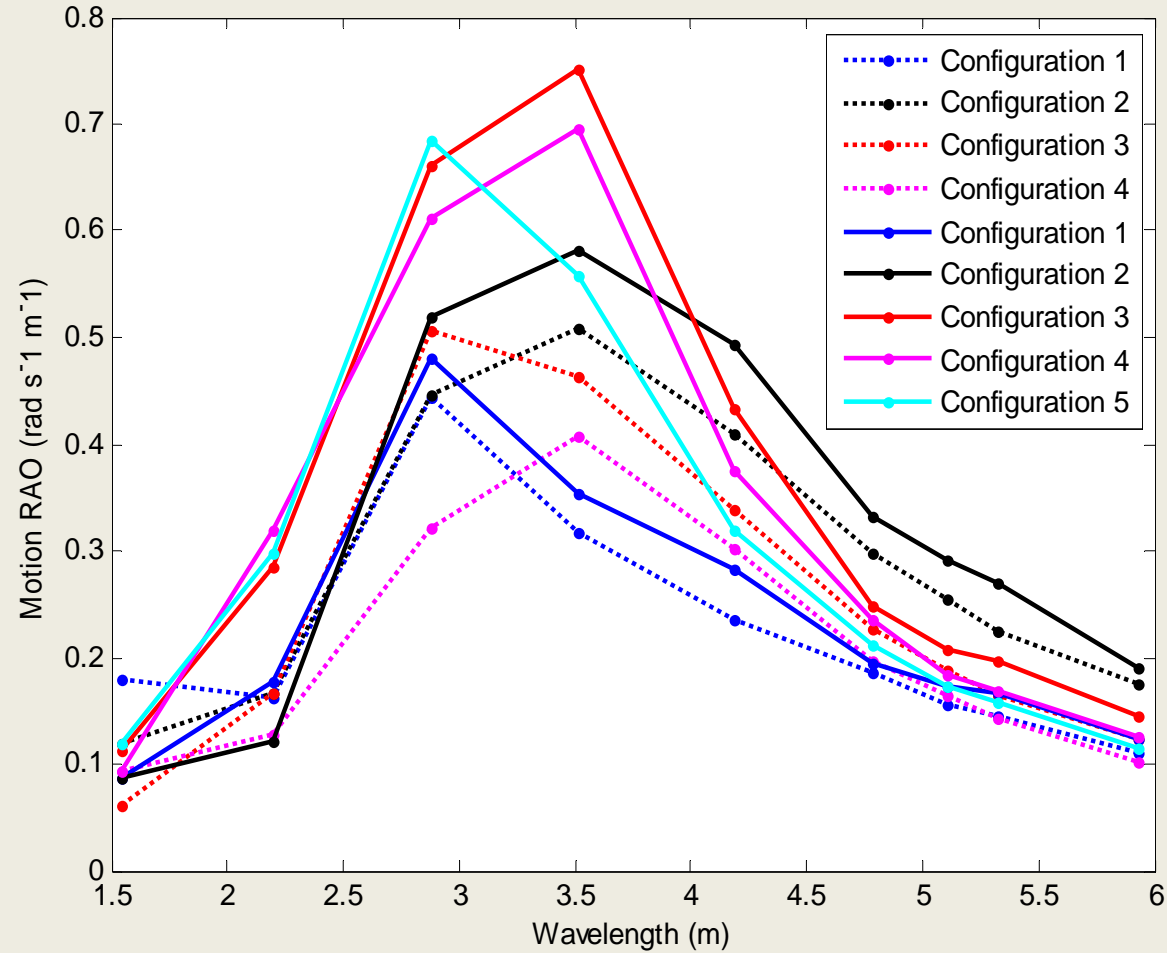

*Heaving Pontoon facing Incident Waves*  
n.b. Motion RAO is measured in angular velocity per metre wave height

*Pitching pontoons facing Incident Waves*

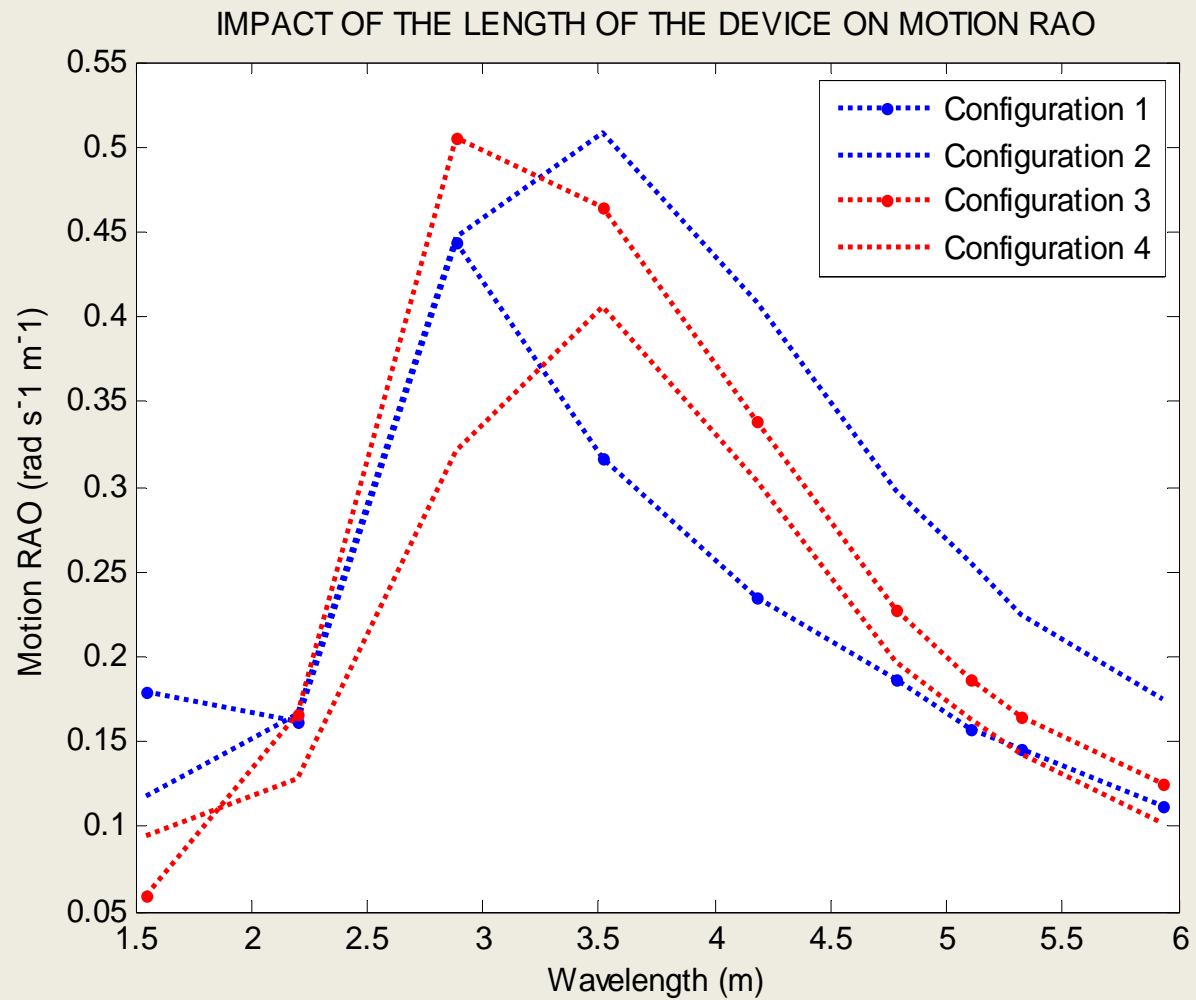

n.b. Motion RAO is measured in angular velocity per metre wave height

### IMPACT OF THE PONTOON CONFIGURATION ON POWER OUTPUT

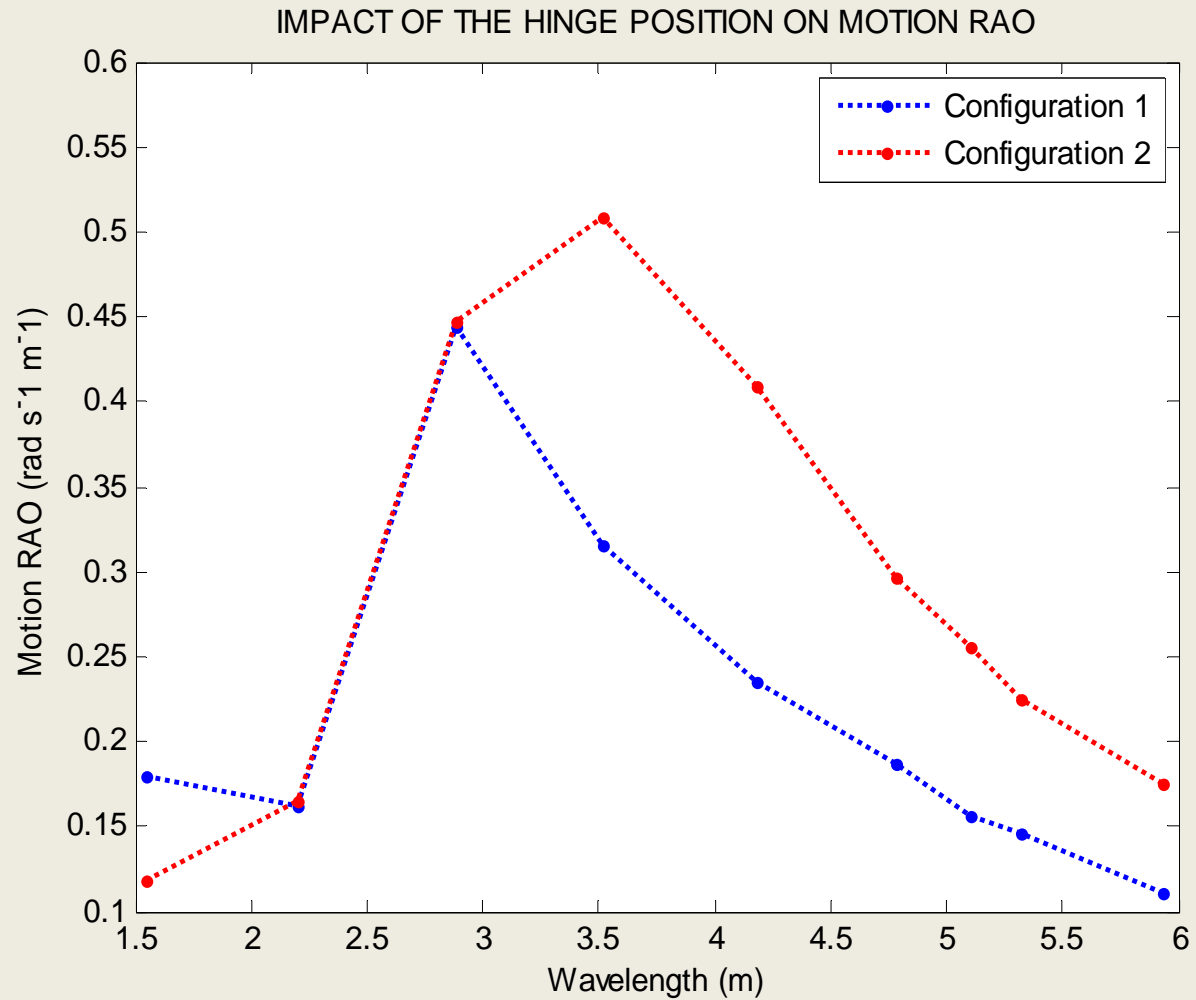

*Dashed Lines represent Heaving Pontoon facing Incident Wave*  
*Solid Lines represent Pitching Pontoon facing Incident Wave*

n.b. Motion RAO is measured in angular velocity per metre wave height

*Heaving Pontoon facing Incident Waves*

n.b. Motion RAO is measured in angular velocity per metre wave height

*Heaving Pontoon facing Incident Waves*

n.b. Motion RAO is measured in angular velocity per metre wave height

### IMPACT OF THE SPACING BETWEEN THE PITCHING BODY PONTOONS ON MOTION RAO

*Heaving Pontoon facing Incident Waves*

n.b. Motion RAO is measured in angular velocity per metre wave height

# Outcomes

- Length of device and configuration of pontoons
- **Position of heaving pontoon in relation to wave propagation**
- Draft of the device
- Direction of the incident wave
- Power take off system

*Configuration 1*

n.b. Motion RAO is measured in angular velocity per metre wave height

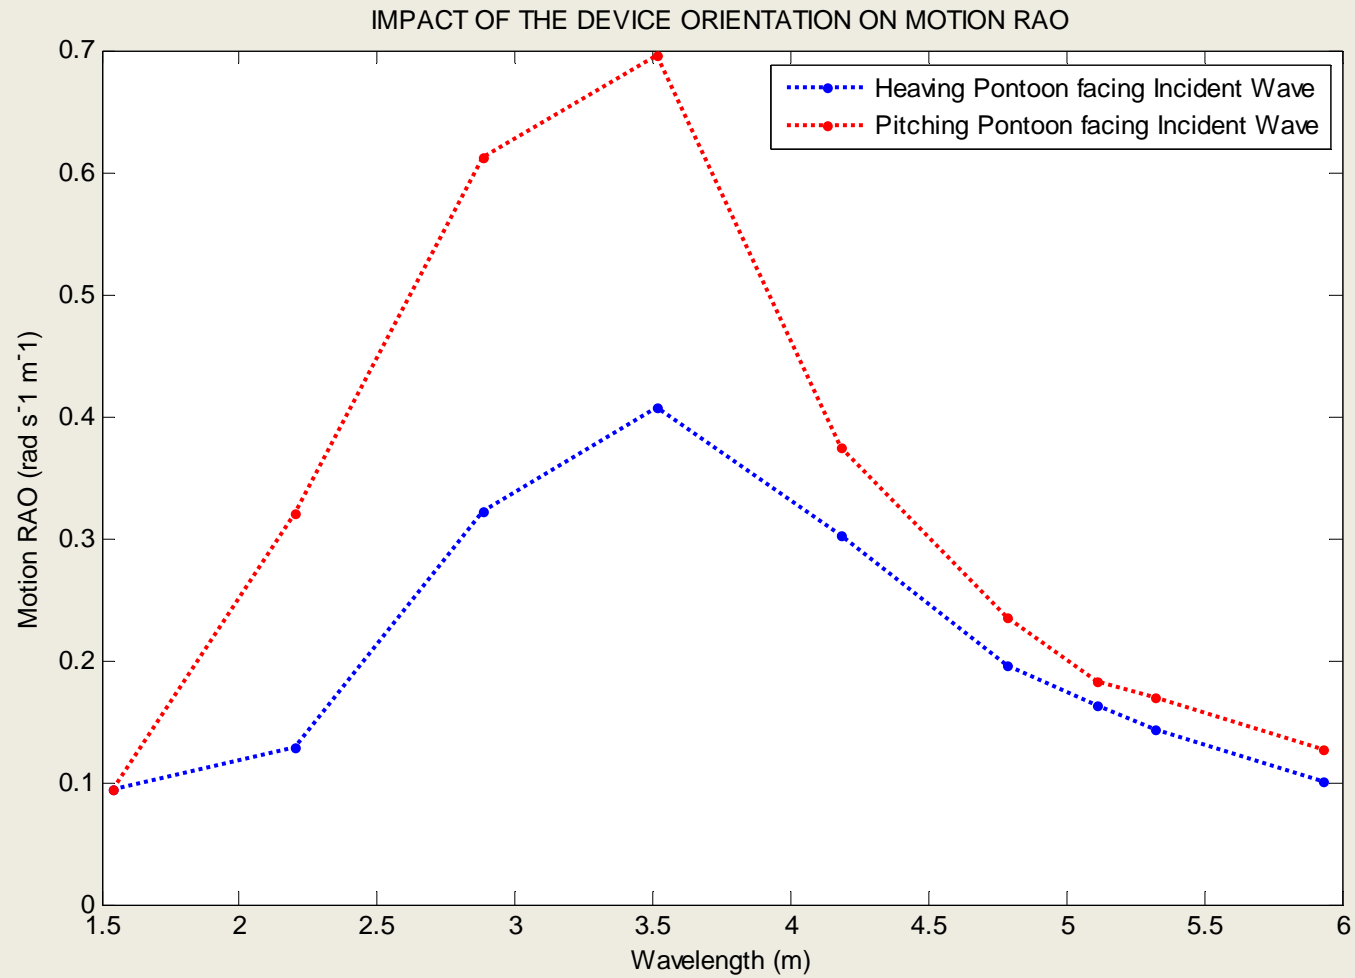

*Configuration 2*

n.b. Motion RAO is measured in angular velocity per metre wave height

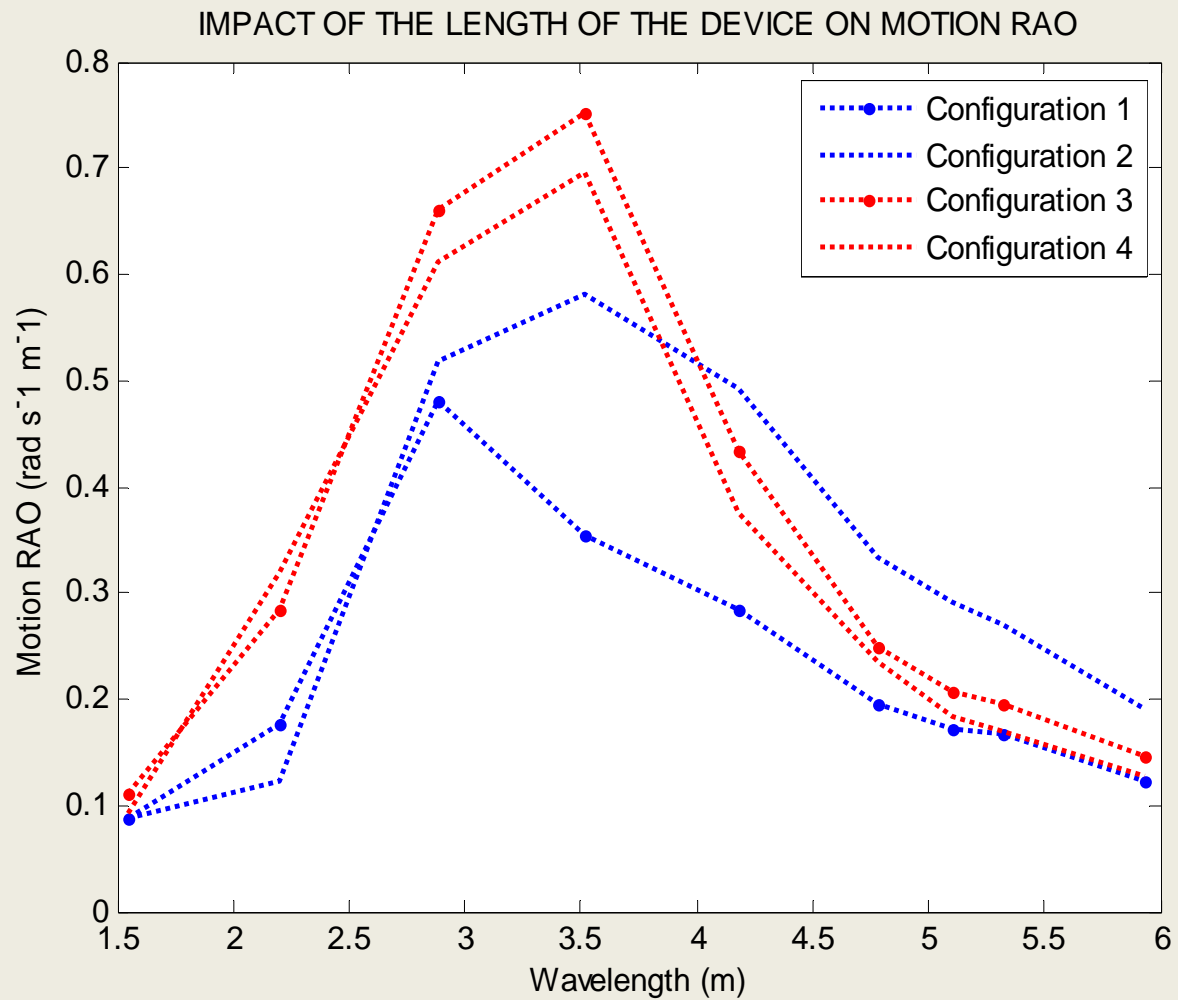

*Configuration 3*

n.b. Motion RAO is measured in angular velocity per metre wave height

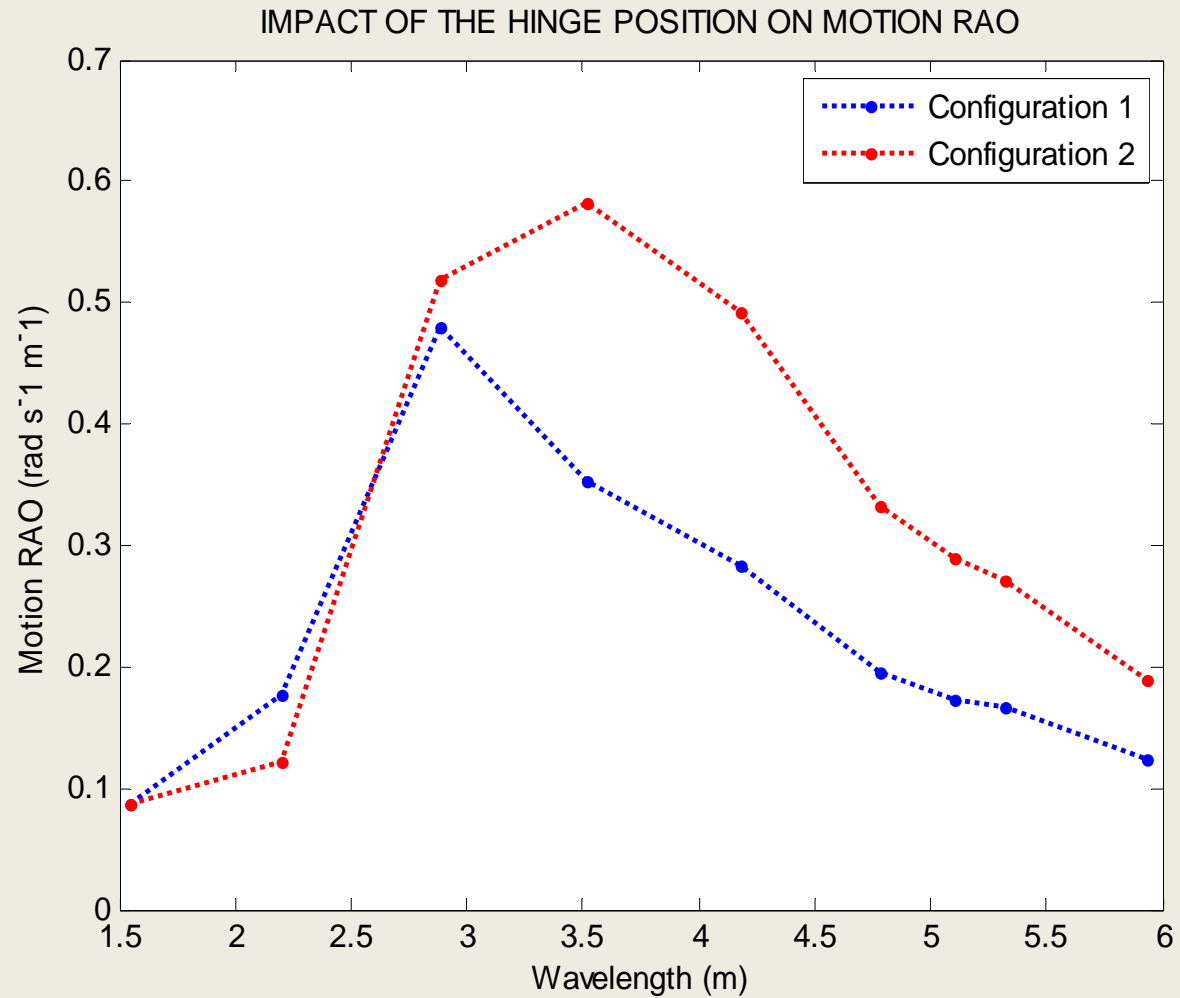

*Configuration 4*

n.b. Motion RAO is measured in angular velocity per metre wave height

*Pitching Pontoon facing Incident Waves*

n.b. Motion RAO is measured in angular velocity per metre wave height

*Pitching Pontoon facing Incident Waves*

n.b. Motion RAO is measured in angular velocity per metre wave height

### IMPACT OF THE SPACING BETWEEN THE PITCHING BODY PONTOONS ON MOTION RAO

*Pitching Pontoon facing Incident Waves*

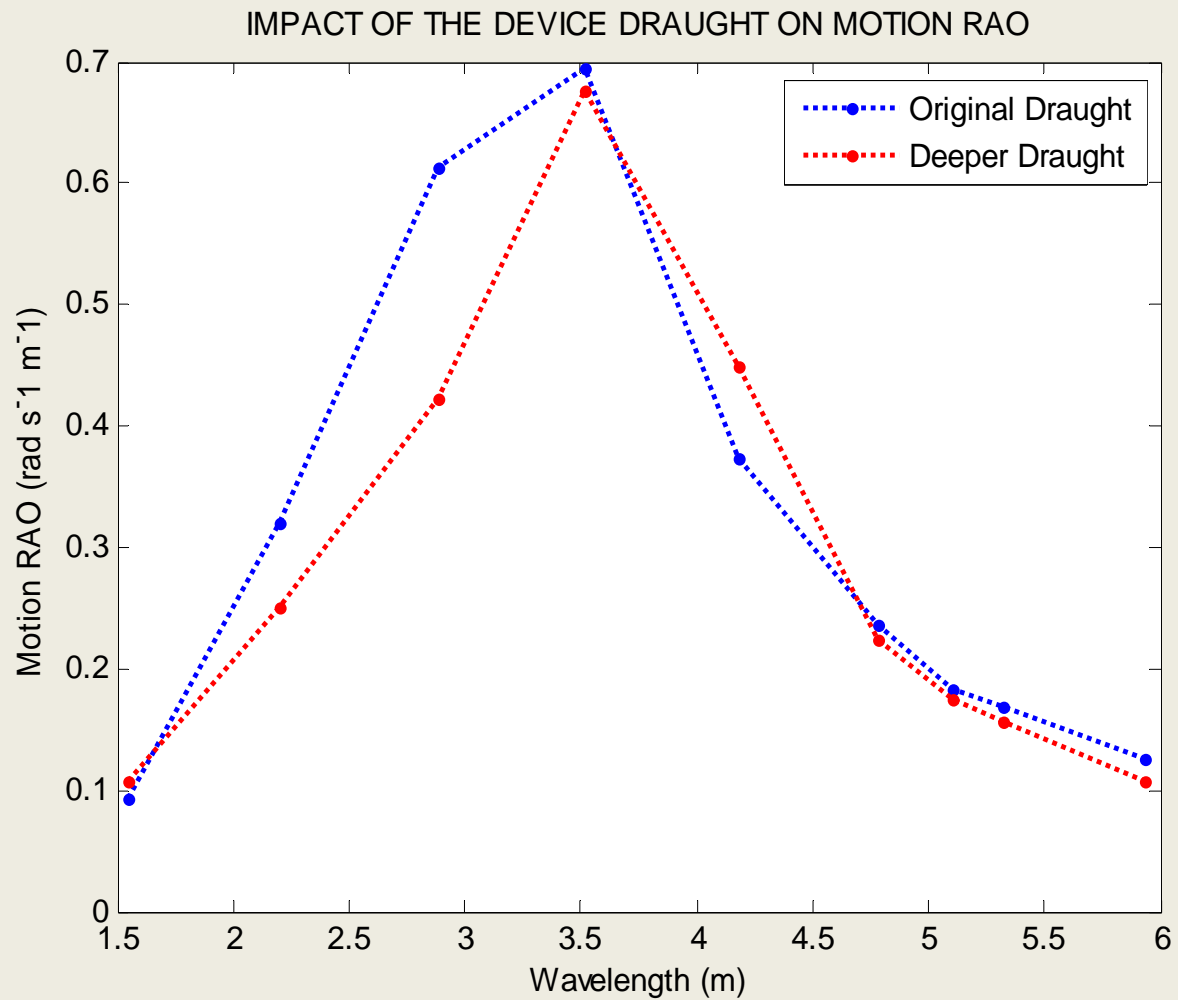

n.b. Motion RAO is measured in angular velocity per metre wave height

# Outcomes

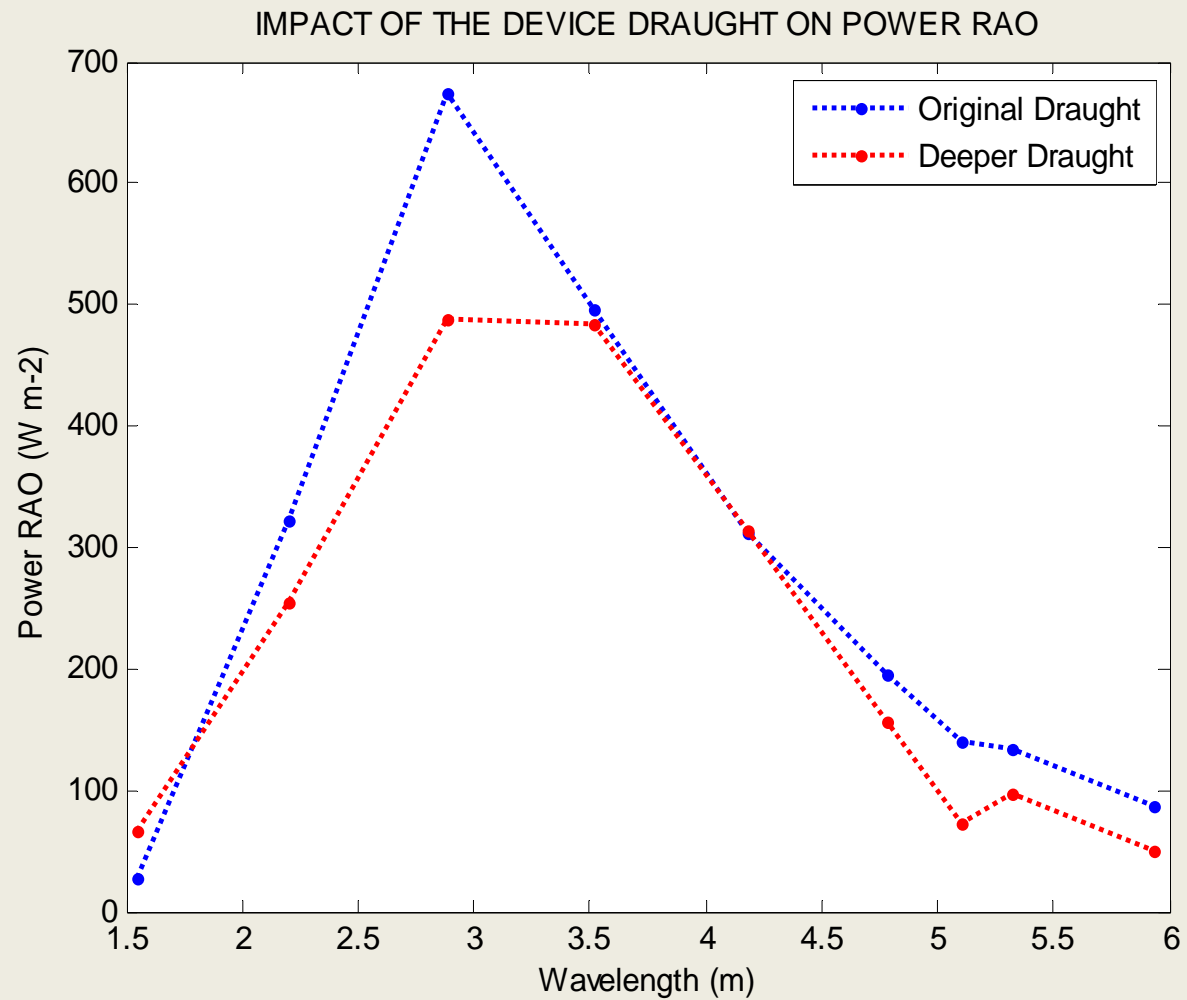

- Length of device and configuration of pontoons
- Position of pitching pontoon in relation to wave propagation
- **Draft of the device**
- Direction of the incident wave
- Power take off system

*Configuration 4, Pitching Pontoon facing Incident Waves*

n.b. Motion RAO is measured in angular velocity per metre wave height

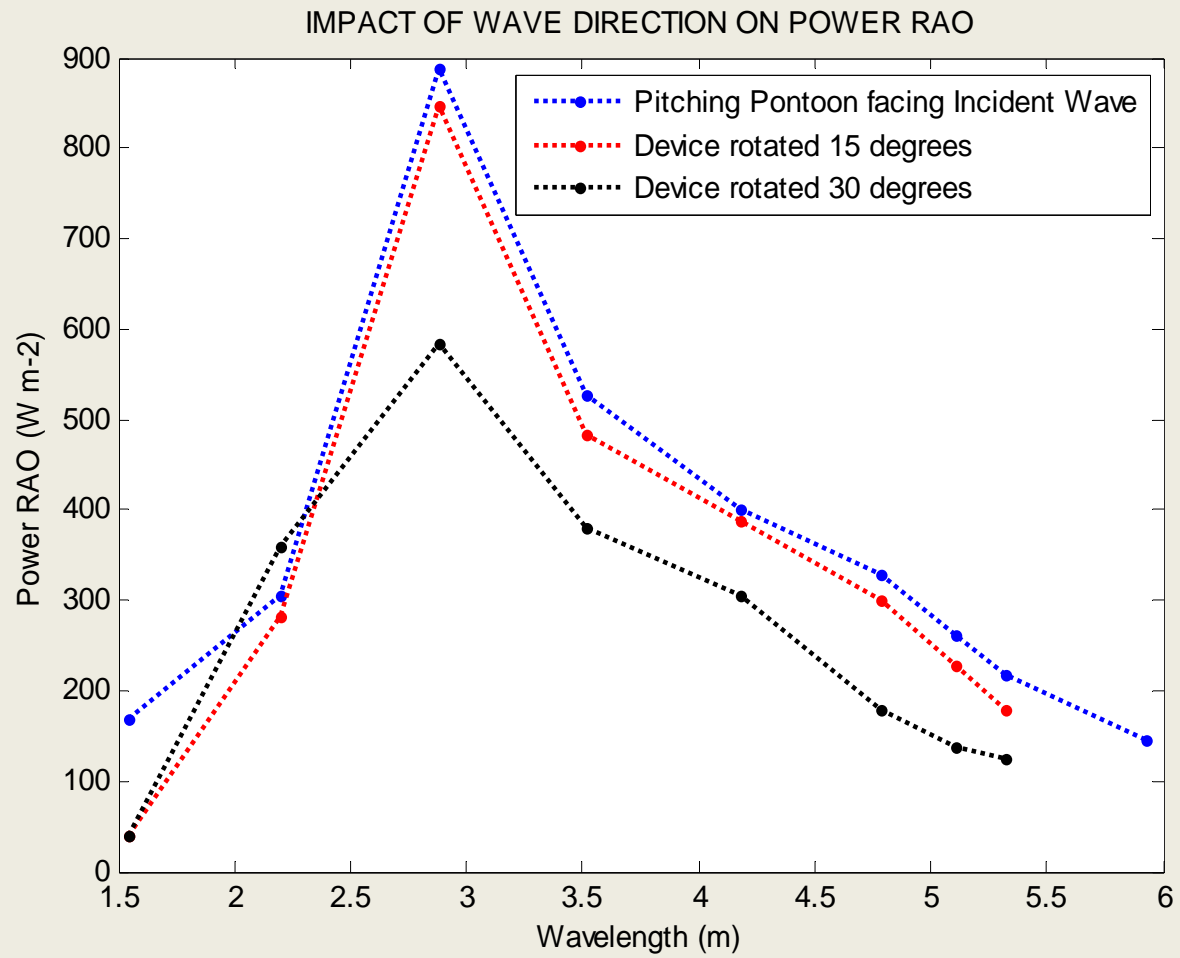

*Configuration 3, Pitching Pontoon facing Incident Waves*

n.b. Power RAO is measured in power per metre wave height squared

# Outcomes

- Length of device and configuration of pontoons
- Position of pitching pontoon in relation to wave propagation
- Draft of the device
- **Direction of the incident wave**
- Power take off system

*Configuration 5*

n.b. Power RAO is measured in power per metre wave height squared

# Outcomes

- Length of device and configuration of pontoons
- Position of pitching pontoon in relation to wave propagation
- Draft of the device
- Direction of the incident wave
- **Power take off system**

### MOTION RAO FOR OPTIMISED COULOMB DAMPING

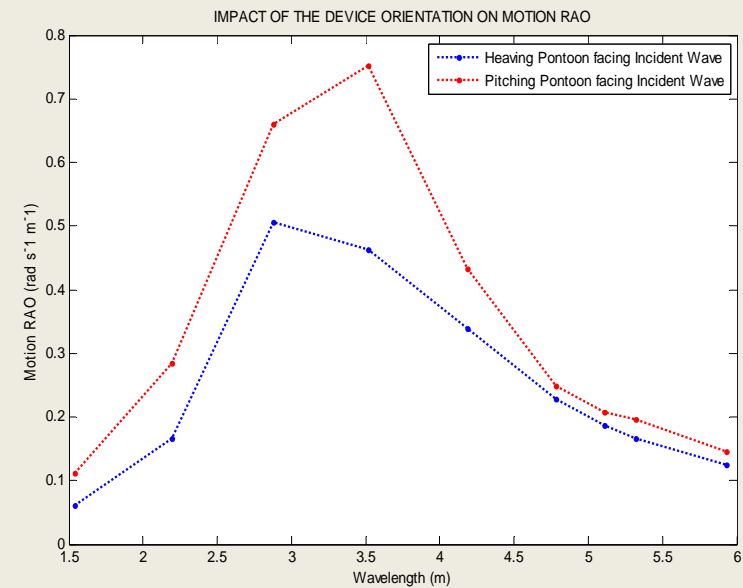

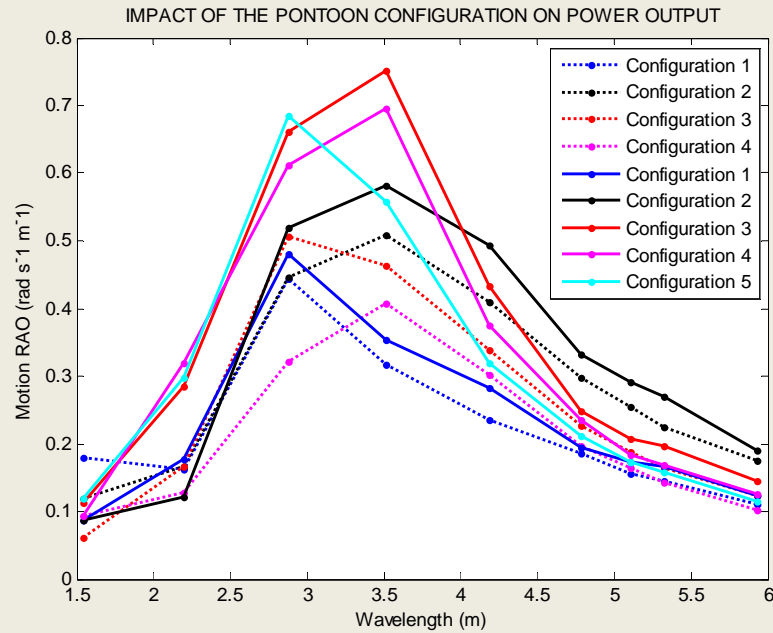

n.b. Power RAO is measured in power per metre wave height squared

POWER RAO FOR OPTIMISED COULOMB DAMPING

n.b. Power RAO is measured in power per metre wave height squared

# Conclusion
